

CompTIA Security+™ Certification

"Benchmarking foundational skills through the CompTIA Security+ certification and then adding progressive layers of expertise seems to us to be absolutely the right thing to do, from both the customer and employee standpoints."

- Steve Jordan
Vice President, System Engineering & Consulting, McAfee, Inc.

Security+™ Certification Program

Computer Teknology Institute uses accelerated learning methods to deliver vast amounts of information in the shortest possible time.

Computer Teknology Institute builds students skills by providing a high-quality learning environment with no distractions geared toward the success of its students. This success means not only certification, but a solid education that enables the individual's creative application of their skills.

Ask yourself these questions

"Can I wait 12 months to learn the skills I need in my job today?"

"Have I got the 100's of hours of personal time available for self study prior to a course?"

"Can I or my employer afford for me to take many weeks off of work to complete my education?"

If you answer no to any of these questions then we are your only option.

Key benefits for becoming CompTIA Security+ certified:

A solid credential that can be utilized in any industry.

- **U.S. Dept. of Defense and Directive 8570:** U.S. DOD employees or contractors engaged in work related to information security are required to be certified, as specified in a list of certifications included in the Directive 8570 manual, and CompTIA Security+ is one of the designated certifications.
- **Healthcare industry and HIPAA (Health Insurance Portability and Accountability Act):** This Congressional Act of 1996 requires that standards be met in the security and privacy of data in the healthcare industry. One way that healthcare companies can demonstrate their compliance with the standards in this act is to verify certification of their network and information security staff.
- **Financial industry and web-based attacks:** The financial industry and its customers are vulnerable to attacks designed to gain access to personal account information. Those who provide network security are critical in this business, and the CompTIA Security+ certification is an assurance of baseline competency.

Validation of achievement in an industry-valued skill.

- All industries need trained security professionals to combat hackers and security threats. CompTIA Security+ shows employers you can maintain the integrity of their business communications, infrastructure and operations.

Goals

CompTIA Security+ validates your commitment to security. Business owners across all industries want to hire professionals who can keep their networks secure. A CompTIA Security+ credential on your resume proves to employers your ability to keep their information safe from network security breaches.

Build Your Skills And Your Career: Certify Yourself

Our primary goal is your education. Computer Teknology Institute provides thorough instructor-led training to ensure that you learn the fundamentals, and earn your certification. You will emerge able to immediately apply your new knowledge in your career environment.

The Exam

The exam tests five domain areas:

- General Security Concepts (30%)
- Communication Security (20%)
- Infrastructure Security (20%)
- Basics of Cryptography (15%)
- Operational/Organizational Security (15%)

The Security+ exam consists of 100 questions to be completed in 90 minutes. The minimum passing score is 764, graded on a scale of 100 - 900. Test results are displayed as soon as you complete the exam.
